

RocITSafe™ Defender Elite

The Bare-Metal-Boot RocITSafe™ Defender Elite incorporates proprietary and standard application software and is designed from the ground up to provide one of the most secure virtual USB systems ever constructed – the ultimate in secure virtual-user systems. It is highly portable, requires multi-factor authentication to access and easily integrates into existing IT infrastructure while persisting the organizations existing security policies and procedures.

It leverages virtually any laptop or desktop computer system as the user host platform – seamlessly – supports industry standard software packages as well as proprietary packages that run within the guest operating system(s) (currently Windows XP and Windows 7) and provides users the flexibility to customize their individual desktops according to specific needs or desires without compromising security and data protection within the RocITSafe system.

RocITSafe is available today; including multiple sizes of FIPS and non-FIPS certified thumb drives in sizes up to 128GB. RocITSafe creates a highly secure and portable container into which the user environment can reside including user-specific application software as well as user-generated data.

With the multi-factor authentication, RocITSafe virtually guarantees your system cannot be compromised through unauthorized access and because of the unique design characteristics of RocITSafe, outside unauthorized access points into the system are eliminated.

RocITSafe supports everyone from the casual user to the sophisticated Super-User with the same secure RocITSafe software install. It is highly configurable and customizable so that users as well as System Integrators (SI's) can add their own custom and/or proprietary pieces on the RocITSafe platform, according to their specific needs or those of their customers or specific requirements based on missions, etc.

For more information about how RocITSafe can help you reach your mobile data protection goals, please contact your local sales representative or Kanguru Solutions at the address and phone listed at the right.

Key Benefits:

- System is highly secure
- Configurable and flexible operating environment
- Utilizes FIPS certified components
- Minimal host hardware to support
- Restricts access to local host resources (i.e. Hard Drive, Printers, etc.)
- No hard drive required on host platform
- Allows use of at least one free USB port
- Multi-factor authentication
- Supports CAC, PIV and Smart Cards
- Supports multiple operating systems
- Supports multiple web browsers
- Supports full Internet web access
- Leverages broadband connectivity
- Supports standard applications software
- Supports full e-mail client (i.e. Outlook)

Recommended Minimum System Configuration:

- 1.6 GHz processor
- 2 GB memory
- Two USB 2.0 ports
- LAN/WAN Card: 10/100baseT support
- 16 GB thumbdrive

Optional Hardware:

- Internal/external wireless card
- Enhanced video card
